

Akshay Kashyap M

AI DEVELOPER · BACKEND ENGINEER · LLM SYSTEMS BUILDER

kishanakshu67@gmail.com +91 9886056948 github.com/AkshayKashyap18 Bangalore, India

SUMMARY

AI & Data Science undergraduate, working as an AI Developer since September 2025. I build production FastAPI services and the LLM systems that sit on top of them. Recent work: a document-extraction pipeline scoring F1 0.846 against a 118-page human gold set, up from 0.25 for the system it replaced, at \$0.0117 per page; an agentic quoting workflow in daily production use that took quoting from 24 hours to 4 minutes; and an ERP-to-lakehouse migration whose first table went live at 3.9M rows.

EXPERIENCE

AI Developer — Alrium

Sep 2025 — Present

Building production backend services and the AI systems layered on top of them.

- Backend services in Python and FastAPI against Supabase and PostgreSQL — authentication, role-based access control and query paths that hold under load — deployed in Docker containers.
- The three production systems below were built in this role.

Python · FastAPI · Supabase · PostgreSQL · PyTorch · Docker · OpenAI API

SELECTED PRODUCTION WORK

LLM Extraction Pipeline

2026

Document extraction with measured guardrails

F1 0.846 on a 118-page human gold set — against 0.25 for the system replaced, and 0.668 for the same model on raw HTML, which is what makes the cleaner defensible rather than assumed. 600 pages ran with zero errors at \$0.0117 each.

MY ROLE Sole author of the extraction module — prompts, guards, fallback, SQL-safety layer, service and alerting. Two boundaries: the definition of a valid offer came from the rule owner, and the cleaner concept from a reference script; the table-atomicity fix and guards were mine.

- Prompts and their hallucination filters versioned as immutable pairs — rollback is one env variable.
- Traced a term-corruption bug across four systems to unquoted SQL formatting downstream.

Python · AWS Bedrock · Anthropic Claude · BeautifulSoup · FastAPI · Docker · Selenium · CloudWatch

Lakehouse Migration Platform

2026

Client-governed ERP migration

The first table went live end to end — 3.9M rows cut from 180 columns to the 22 signed off — and became the template for every table after. A key-uniqueness gate I made mandatory caught four tables silently corrupted by duplicate keys.

MY ROLE I own the rules engine and column ordering, the type dictionary and cast reconciliation, the sign-off generator, the production worker notebook and the orchestrator. The audit notebook and warehouse bridge were another engineer's build — I ran, debugged, extended and directed those.

- A returned tick-sheet drives keep/drop/rename/cast/order for 13 tables — onboarding is data entry, not code.
- Made key-uniqueness the mandatory first gate after finding append-mode duplicates corrupting four tables.

Microsoft Fabric · Delta Lake · PySpark · Spark SQL · T-SQL · Python · Medallion Architecture

Agentic Quote Engine

2026

Conversation in, priced quote out

The agent is in daily production use, handling multiple configurations in a single quote and explaining every flagged issue in plain language rather than failing silently.

- Agentic graph reasons over a plain-English brief, asking only what it cannot infer.
- Real-time feasibility validation against operating conditions, with plain-language explanations.

TEAM OUTCOME 24h → 4min Time to quote · 95% First-pass accuracy

LangGraph · Google Gemini · FastAPI · React · Supabase · AWS · Python

PERSONAL PROJECTS

MindMate — AI Mental Health Companion

github.com/.../Mindmate

A complete assessment-to-guidance loop with authenticated user history via Clerk — the screener stays clinically faithful while the experience stops feeling like a form.

- Full-stack platform for mental health assessments via PHQ-9, GAD-7 and a Random Forest classifier.
- Integrated Botpress chatbot, Vapi voice bot, Clerk authentication and D-ID avatar support.

React · Django · Firebase · Scikit-Learn · Vapi · Botpress · Clerk · D-ID

MCP Todo — AI Task Management System

github.com/.../Mcp-todo

An orchestration layer where AI-driven workflows are first-class — the agent reads real state and takes real actions, with the protocol enforcing the boundary.

- AI-powered task management built on Model Context Protocol architecture for intelligent workflow orchestration.
- Scalable backend APIs for task management, contextual execution and AI-driven automation.

Python · FastAPI · MCP · REST APIs · Git

TECHNICAL SKILLS

LANGUAGES	Python, TypeScript, JavaScript, SQL, Java, C
AI & LLM SYSTEMS	LangGraph, AWS Bedrock, Anthropic Claude, OpenAI API, Google Gemini, Prompt Engineering, LLM Evaluation, Embeddings & Semantic Search, MCP, PyTorch, Transformers, Hugging Face
BACKEND	FastAPI, Django, REST APIs, Supabase, PostgreSQL, Auth & RBAC, Firebase
DATA ENGINEERING	Microsoft Fabric, Delta Lake, PySpark, Medallion Architecture, Change Data Capture, Data Quality Profiling, NumPy, Power BI
CLOUD & DEVOPS	AWS Lambda, AWS S3, AWS EC2, Docker, Terraform, Git
FRONTEND	React, Next.js, Tailwind CSS, Framer Motion

EDUCATION

B.E. — AI & Data Science

9.58 CGPA · 2022 – 2026

REVA University, Bangalore

XII — Computer Science

93.83% · 2022

Vidya Mandir, Bangalore

X — CBSE

90.33% · 2020

Air Force School Hebbal, Bangalore

ACHIEVEMENTS & CERTIFICATIONS

3rd Place — SIT Hackathon 2025

Placed third building under competition time pressure.

Core Member — Alverse Club

2023–Present. Led workshops and AI learning events.

Event Manager — AI-Fest 2024

Organized AI-themed fests with 100+ participants.

Devtrack Club Member

Contributed to collaborative app development sprints.

AI Fundamentals — IBM

Big Data 101 — IBM

Java Programming — Udemy
